

FEMAZON — Master Product Requirement Document (PRD)

Project Name: Femazon (Women-First Digital Lifestyle & Ecosystem Platform)
Project Type: Women-Focused Marketplace + Services + AI Personalization Platform
Document Version: 1.0 (Final Architecture Blueprint)
Initial Target Market: India

Executive Vision: Femazon is a women-first digital platform designed to bring together the products, services, experiences, businesses, recommendations, and communities that women need in their everyday and special lives.

1. Executive Summary & Core Concept

Femazon is built around a single core question: *"Can a woman come to Femazon with a need and complete that journey without having to search across multiple platforms?"*
Currently, a woman preparing for an event (wedding, party, corporate event, etc.) relies on multiple disjointed platforms:

- Fashion e-commerce platforms for clothing
- Instagram / Google for finding local makeup artists and mehendi artists
- Wedding aggregators for service vendors
- Messaging apps / Phone calls to check slot availability and book

The Femazon Solution Loop:

User Photo → AI Understanding & Analysis → Personalized Complete Look → Product Selection → Local Service Match → Booking & Checkout

2. Competitive Analysis & Strategy

Platform	Key Strengths	Limitations	Femazon Strategic Edge
WEARVO	AI Styling +	Only fashion styling;	360 Look Realization: Links

Platform	Key Strengths	Limitations	Femazon Strategic Edge
	Body/Skin Analysis	no service booking	style suggestions directly to local makeup artists, hair styling, and accessories in one booking flow.
WedMeGood	Vendor directory for weddings	Strictly restricted to weddings; high post-event churn	Full Lifecycle Engagement: Retains users for everyday fashion, workwear, baby showers, birthdays, and professional networking.
Stitch Fix	AI Personal Styling & Subscriptions	High inventory costs and overhead	Asset-Light Marketplace: Aggregates independent sellers and local service providers without inventory risk.
Etsy / Ellevate	Niche seller ecosystem & community	Fragmented community vs. commerce	Ecosystem Commerce: Women business owners can sell products, offer services, network, and hire talent on one platform.

3. Platform Architecture & Core Modules

Module 1: AI Style Studio (Signature Feature)

- **Photo Upload & Consent:** Secure photo analysis with explicit user control and data deletion mechanisms.
- **Illumination Guardrail Protocol:** Prevents inaccurate analysis caused by lighting variations. UI allows manual correction of undertones (Cool, Warm, Neutral).
- **Occasion & Budget Selection:** Options for Wedding, Office Party, Festival, College, Casual, Travel, etc.
- **Complete Look Generator:** Generates a full head-to-toe ensemble: Outfit + Jewellery + Footwear + Handbag + Makeup Style + Hair Styling.

Module 2: E-Commerce Marketplace

- **Catalog Categories:** Sarees, Kurtis, Lehengas, Westernwear, Office Wear, Jewellery, Footwear, Handbags.
- **Visual Search:** Screenshot/photo-based lookup to find matching SKUs in the Femazon inventory.

Module 3: Services Engine & Geo-Booking System

- **Geo-Spatial Matching:** Locates verified local professionals (Makeup Artists, Saree Drapers, Mehendi Artists, Photographers).
- **Slot Management:** Real-time booking requests, slot confirmation, and venue/salon service selection.

Module 4: Digital Wardrobe (Virtual Closet — Phase 2)

- **Digital Inventory:** Allows users to photo-catalog their existing clothing and accessories.
- **AI Outfit Recommendation:** Suggests outfits based on owned items, event type, and weather.
- **Gap Identification:** Recommends missing items (e.g., "Add a Gold Potli bag to complete this look") linked directly to Femazon vendor SKUs.

Module 5: Women Ecosystem & Business Directory

- **Verified Women-Owned Business Badge:** Verification pipeline for women entrepreneurs.
- **Community & Learning Hub:** Discussion forums, networking, and micro-courses on business, digital marketing, and career growth.

4. Master System Data Schema

The system data structure is divided into 7 primary relational modules:

5. Technical Architecture & Stack

- **Frontend:** Next.js (App Router), React, TypeScript, Tailwind CSS, Framer Motion, Lucide-React.
- **Backend:** Next.js API Routes / Node.js (NestJS).
- **Database & ORM:** PostgreSQL + Prisma ORM.
- **Authentication:** NextAuth.js (Credentials, OAuth, Role-based Access Control).
- **Payments:** Razorpay / Cashfree integration.
- **Storage:** S3-compatible Object Storage for media.

6. Phased Execution Roadmap

Phase 1: MVP Core Foundation (Current Scope)

- User Authentication & Role Management (Customer, Vendor, Admin)
- Multi-Vendor E-Commerce (Product Listing, Cart, Checkout)
- Local Services Directory & Slot Booking System (Makeup, Mehendi, Photography)
- Vendor Dashboard (Manage Products, Services, Bookings)
- Admin Panel (Vendor Verification & Product Moderation)

Phase 2: AI Personalization & Digital Wardrobe

- Style DNA Profile Engine & Photo Analysis
- Complete Look Recommendation Engine
- Digital Wardrobe (Upload, Categorize, Gap Match)

Phase 3: Advanced AI & Event Engine

- Visual Search (Screenshot-to-Product Matching)
- Dynamic Event Planner Engine (Wedding, Birthday, Corporate Checklist)
- Virtual Try-On Visualization

Phase 4: Community, Business & Scale

- Women-Owned Business Verification Badge System
- Community Forums & Peer Networking
- Learning Hub & Professional Tools
